

Expanding & Factorising

You must always collect like terms when simplifying an expression. So, for example,

$$a^2b + b + 3a^2b = 4a^2b + b.$$

Get into the habit of ordering the letters alphabetically so that it is easier to see like terms

$$3a^2b + 2ba^2 - a^2b = 3a^2b + 2a^2b - a^2b = 4a^2b.$$
