**Time: 1 hour 30 minutes**

**Materials required for examination**

Mathematical Formulae (Pink)

**Items included with question papers**

Nil

**Candidates may use any calculator allowed by the regulations of the Joint Council for Qualifications. Calculators must not have the facility for symbolic algebra manipulation, differentiation and integration, or have retrievable mathematical formulae stored in them.**

**Instructions to Candidates**

---

Write the name of the examining body (Edexcel), your centre number, candidate number, the unit title (Core Mathematics C2), the paper reference (6664), your surname, initials and signature.

**Information for Candidates**

---

A booklet 'Mathematical Formulae and Statistical Tables' is provided.  
Full marks may be obtained for answers to ALL questions.  
There are 9 questions in this question paper. The total mark for this paper is 75.

**Advice to Candidates**

---

You must ensure that your answers to parts of questions are clearly labelled.  
You must show sufficient working to make your methods clear to the Examiner.  
Answers without working may not gain full credit.

1. Find the first 3 terms, in ascending powers of  $x$ , of the binomial expansion of

$$(2 - 3x)^5,$$

giving each term in its simplest form.

**(4)**

---

2. Find the values of  $x$  such that

$$2 \log_3 x - \log_3(x - 2) = 2$$

**(5)**

---

3.

**Figure 1**

The circle  $C$  with centre  $T$  and radius  $r$  has equation

$$x^2 + y^2 - 20x - 16y + 139 = 0.$$

(a) Find the coordinates of the centre of  $C$ .

**(3)**

(b) Show that  $r = 5$

**(2)**

The line  $L$  has equation  $x = 13$  and crosses  $C$  at the points  $P$  and  $Q$  as shown in Figure 1.

(c) Find the  $y$  coordinate of  $P$  and the  $y$  coordinate of  $Q$ .

**(3)**

Given that, to 3 decimal places, the angle  $PTQ$  is 1.855 radians,

(d) find the perimeter of the sector  $PTQ$ .

**(3)**

---

4.

$$f(x) = 2x^3 - 7x^2 - 10x + 24.$$

(a) Use the factor theorem to show that  $(x + 2)$  is a factor of  $f(x)$ .

**(2)**

(b) Factorise  $f(x)$  completely.

**(4)**

---

5.

**Figure 2**

Figure 2 shows the line with equation  $y = 10 - x$  and the curve with equation  $y = 10x - x^2 - 8$ .

The line and the curve intersect at the points  $A$  and  $B$ , and  $O$  is the origin.

- (a) Calculate the coordinates of  $A$  and the coordinates of  $B$ . (5)

The shaded area  $R$  is bounded by the line and the curve, as shown in Figure 2.

- (b) Calculate the exact area of  $R$ . (7)
- 

6. (a) Show that the equation

$$\tan 2x = 5 \sin 2x$$

can be written in the form

$$(1 - 5 \cos 2x) \sin 2x = 0. \quad (2)$$

- (b) Hence solve, for  $0 \leq x \leq 180^\circ$ ,

$$\tan 2x = 5 \sin 2x,$$

giving your answers to 1 decimal place where appropriate.

You must show clearly how you obtained your answers. (5)

---

7.

$$y = \sqrt{3^x + x}$$

(a) Complete the table below, giving the values of  $y$  to 3 decimal places.

$x$	0	0.25	0.5	0.75	1
$y$	1	1.251			2

(2)

(b) Use the trapezium rule with all the values of  $y$  from your table to find an approximation for the value of

$$\int_0^1 \sqrt{3^x + x} \, dx.$$

You must show clearly how you obtained your answer.

(4)

8.

**Figure 3**

A manufacturer produces pain relieving tablets. Each tablet is in the shape of a solid circular cylinder with base radius  $x$  mm and height  $h$  mm, as shown in Figure 3.

Given that the volume of each tablet has to be  $60 \text{ mm}^3$ ,

(a) express  $h$  in terms of  $x$ ,

(1)

(b) show that the surface area,  $A \text{ mm}^2$ , of a tablet is given by  $A = 2\pi x^2 + \frac{120}{x}$ .

(3)

The manufacturer needs to minimise the surface area  $A \text{ mm}^2$ , of a tablet.

(c) Use calculus to find the value of  $x$  for which  $A$  is a minimum.

(5)

(d) Calculate the minimum value of  $A$ , giving your answer to the nearest integer.

(2)

(e) Show that this value of  $A$  is a minimum.

(2)

9. A geometric series is  $a + ar + ar^2 + \dots$

(a) Prove that the sum of the first  $n$  terms of this series is given by

$$S_n = \frac{a(1-r^n)}{1-r}$$

The third and fifth terms of a geometric series are 5.4 and 1.944 respectively and all the terms in the series are positive.

For this series find,

(b) the common ratio, (2)

(c) the first term, (2)

(d) the sum to infinity. (3)

---

**TOTAL FOR PAPER: 75 MARKS**

**END**

**Summer 2012**  
**6664 Core Mathematics 2**  
**Mark Scheme**

Question number	Scheme	Marks
<b>1</b>	$[(2-3x)^5] = \dots + \binom{5}{1} 2^4(-3x) + \binom{5}{2} 2^3(-3x)^2 + \dots, \dots\dots$ $= 32, -240x, +720x^2$	<p>M1</p> <p>B1, A1, A1</p>
Notes	<b>Total 4</b>	
	<p><b>M1:</b> The <b>method</b> mark is awarded for an attempt at Binomial to get the second and/or third term – need <b>correct</b> binomial coefficient combined <b>with correct power of x</b>. Ignore errors (or omissions) in powers of 2 or 3 or sign or bracket errors. Accept any notation for <math>{}^5C_1</math> and <math>{}^5C_2</math>, e.g. <math>\binom{5}{1}</math> and <math>\binom{5}{2}</math> (unsimplified) or 5 and 10 from Pascal's triangle This mark may be given if no working is shown, but either or both of the terms including <math>x</math> is correct.</p> <p><b>B1:</b> must be simplified to 32 ( writing just <math>2^5</math> is <b>B0</b> ). <b>32</b> must be the only constant term in the final answer- so <math>32 + 80 - 3x + 80 + 9x^2</math> is B0 but may be eligible for M1A0A0 .</p> <p><b>A1:</b> is <b>cao</b> and is for <math>-240x</math>. (not <math>+240x</math>) The <math>x</math> is required for this mark</p> <p><b>A1:</b> is c.a.o and is for <math>720x^2</math> (can follow omission of negative sign in working)</p> <p>A list of correct terms may be given credit i.e. series appearing on different lines</p> <p>Ignore extra terms in <math>x^3</math> and/or <math>x^4</math> (isw)</p>	
Special Case	<p>Special Case: <i>Descending powers</i> of <math>x</math> would be</p> $(-3x)^5 + 2 \times 5 \times (-3x)^4 + 2^2 \times \binom{5}{3} \times (-3x)^3 + \dots$ <p>i.e. <math>-243x^5 + 810x^4 - 1080x^3 + \dots</math> This is a misread but award as s.c. M1B1A0A0 if completely "correct" or M1 B0A0A0 for <u>correct binomial coefficient</u> in any form with the correct power of <math>x</math></p>	
Alternative Method	<p><b>Method 1:</b> <math>[(2-3x)^5] = 2^5 \left( 1 + \binom{5}{1} \left(-\frac{3x}{2}\right) + \binom{5}{2} \left(\frac{-3x}{2}\right)^2 + \dots \right)</math> is <b>M1B0A0A0</b> { The M1 is for the expression <b>in the bracket</b> and as in first method– need <b>correct</b> binomial coefficient combined with correct power of <math>x</math>. Ignore bracket errors or errors (or omissions) in powers of 2 or 3 or sign or bracket errors}</p> <p>– answers must be simplified to <math>= 32, -240x, +720x^2</math> for full marks (awarded as before)</p> $[(2-3x)^5] = 2 \left( 1 + \binom{5}{1} \left(-\frac{3x}{2}\right) + \binom{5}{2} \left(\frac{-3x}{2}\right)^2 + \dots \right)$ <p>would also be awarded <b>M1B0A0A0</b></p> <p><b>Method 2: Multiplying out :</b> B1 for 32 and M1A1A1 for other terms with M1 awarded if <math>x</math> or <math>x^2</math> term is correct. Completely correct is 4/4</p>	

Question number	Scheme	Marks
2	$2 \log x = \log x^2$ $\log_3 x^2 - \log_3(x-2) = \log_3 \frac{x^2}{x-2}$ $\frac{x^2}{x-2} = 9$ <p>Solves <math>x^2 - 9x + 18 = 0</math> to give <math>x = \dots</math></p> <p><math>x = 3, x = 6</math></p>	B1 M1 A1 o.e. M1 A1 <hr/> <b>Total 5</b>
Notes	<p><b>B1</b> for <b>this</b> correct use of power rule (may be implied)  <b>M1</b>: for <b>correct</b> use of subtraction rule (or addition rule) for logs            N.B. <math>2 \log_3 x - \log_3(x-2) = 2 \log_3 \frac{x}{x-2}</math> is <b>M0</b>  <b>A1</b>. for correct equation without logs (Allow any correct equivalent including <math>3^2</math> instead of 9.)  <b>M1</b> for attempting to solve <math>x^2 - 9x + 18 = 0</math> to give <math>x =</math> (see notes on marking quadratics)  <b>A1</b> for these <b>two</b> correct answers</p>	
Alternative Method	<p><math>\log_3 x^2 = 2 + \log_3(x-2)</math> is B1,  <i>so</i> <math>x^2 = 3^{2+\log_3(x-2)}</math> needs to be followed by <math>(x^2) = 9(x-2)</math> for M1 A1            Here M1 is for <b>complete</b> method i.e. correct use of powers after logs are used correctly</p>	
Common Slips	<p><math>2 \log x - \log x + \log 2 = 2</math> may obtain B1 if <math>\log x^2</math> appears but <b>the statement is M0</b> and so leads to no further marks  <math>2 \log_3 x - \log_3(x-2) = 2</math> <i>so</i> <math>\log_3 x - \log_3(x-2) = 1</math> and <math>\log_3 \frac{x}{x-2} = 1</math> can earn M1 for <i>correct</i> subtraction rule following error, but no other marks</p>	
Special Case	<p><math>\frac{\log x^2}{\log(x-2)} = 2</math> leading to <math>\frac{x^2}{x-2} = 9</math> and then to <math>x=3, x=6</math>, usually earns B1M0A0, but may then earn M1A1 (special case) so 3/5 [ This <i>recovery</i> after uncorrected error is very common]            Trial and error, Use of a table or just stating answer <b>with both</b> <math>x=3</math> and <math>x=6</math> should be awarded B0M0A0 then final M1A1 i.e. 2/5</p>	

Question number	Scheme	Marks
3	Obtain $\underline{(x \pm 10)^2}$ <b>and</b> $\underline{(y \pm 8)^2}$	M1
(a)	Obtain $\underline{(x - 10)^2}$ <b>and</b> $\underline{(y - 8)^2}$	A1
	Centre is (10, 8). N.B. This may be indicated on <b>diagram only</b> as (10, 8)	A1
(b)	See $\underline{(x \pm 10)^2} + \underline{(y \pm 8)^2} = 25 (= r^2)$ or $(r^2 =) "100" + "64" - 139$ $r = 5$ * (this is a printed answer so need one of the above two reasons)	M1 A1
(c)	Use $x = 13$ in either form of equation of circle and solve resulting quadratic to give $y =$ e.g. $x = 13 \Rightarrow (13 - 10)^2 + (y - 8)^2 = 25 \Rightarrow (y - 8)^2 = 16$ so $y =$ or $13^2 + y^2 - 20 \times 13 - 16y + 139 = 0 \Rightarrow y^2 - 16y + 48 = 0$ so $y =$ $y = 4$ or $12$ ( on EPEN mark one correct value as A1A0 and both correct as A1 A1)	M1 A1 A1
(d)	Use of $r\theta$ with $r = 5$ and $\theta = 1.855$ (may be implied by 9.275)  Perimeter $PTQ = 2r +$ their <b>arc</b> $PQ$ (Finding perimeter of triangle is M0 here)  $= 19.275$ or $19.28$ or $19.3$	M1 A1 A1
		(3) (2) (3) (3)
		<b>11 marks</b>
<b>Alternatives</b>	<i>Method 2:</i> From $x^2 + y^2 + 2gx + 2fy + c = 0$ centre is $(\pm g, \pm f)$	M1
(a)	Centre is $(-g, -f)$ , <b>and so centre is</b> (10, 8).	A1, A1
OR	<i>Method 3:</i> Use any value of $y$ to give two points ( $L$ and $M$ ) on circle. $x$ co-ordinate of mid point of $LM$ is "10" <b>and</b> Use any value of $x$ to give two points ( $P$ and $Q$ ) on circle. $y$ co-ordinate of mid point of $PQ$ is "8" (Centre – chord theorem) . (10,8) is M1A1A1	M1 A1 A1
(b)	<i>Method 2:</i> Using $\sqrt{g^2 + f^2 - c}$ or $(r^2 =) "100" + "64" - 139$ $r = 5$ *	M1 A1
OR	<i>Method 3:</i> Use point on circle with centre to find radius. Eg $\sqrt{(13 - 10)^2 + (12 - 8)^2}$ $r = 5$ *	M1 A1 cao
(c)	Divide triangle $PTQ$ and use Pythagoras with $r^2 - (13 - "10")^2 = h^2$ , then evaluate "8 $\pm$ $h$ " - (N.B. Could use 3,4,5 Triangle and $8 \pm 4$ ). Accuracy as before	M1
Notes	<b>Mark (a) and (b) together</b>	
(a)	<b>M1</b> as in scheme and can be <u>implied</u> by $(\pm 10, \pm 8)$ . <b>Correct centre (10, 8) implies M1A1A1</b>	
(b)	<b>M1</b> for a correct method leading to $r = \dots$ , or $r^2 = "100" + "64" - 139$ (not $139 - "100" - "64"$ ) or for using equation of circle in $\underline{(x \pm 10)^2} + \underline{(y \pm 8)^2} = k^2$ form to identify $r =$ <b>3<sup>rd</sup> A1</b> $r = 5$ ( <b>NB This is a given answer so should follow</b> $k^2 = 25$ or $r^2 = 100 + 64 - 139$ ) <b>Special case:</b> if centre is given as $(-10, -8)$ or $(10, -8)$ or $(-10, 8)$ allow <b>M1A1</b> for $r = 5$ worked correctly as $r^2 = 100 + 64 - 139$	
(d)	Full marks available for calculation using major sector so Use of $r\theta$ with $r = 5$ and $\theta = 4.428$ leading to perimeter of 32.14 for major sector	

Question number	Scheme	Marks
<p><b>4 (a)</b></p> <p><b>(b)</b></p>	$f(-2) = 2.(-2)^3 - 7.(-2)^2 - 10.(-2) + 24$ $= 0 \text{ so } (x+2) \text{ is a factor}$ $f(x) = (x+2)(2x^2 - 11x + 12)$ $f(x) = (x+2)(2x-3)(x-4)$	<p>M1 A1 (2)</p> <p>M1 A1 dM1 A1 (4)</p> <p><b>6 marks</b></p>
<p>Notes (a)</p> <p><b>(b)</b></p>	<p><b>M1</b> : Attempts <math>f(\pm 2)</math> (Long division is M0)  <b>A1</b> : is for <math>=0</math> <b>and conclusion</b>  <b>Note</b>: Stating “hence factor” or “it is a factor” or a “<math>\surd</math>” (tick) or “QED” is fine for the conclusion.  <b>Note</b> also that a conclusion can be implied from a <u>preamble</u>, eg: “If <math>f(-2) = 0</math>, <math>(x + 2)</math> is a factor...” (Not just <math>f(-2)=0</math>)  <b>1<sup>st</sup> M1</b>: Attempts long division by correct factor or other method leading to obtaining <math>(2x^2 \pm ax \pm b)</math>, <math>a \neq 0</math>, <math>b \neq 0</math>, even with a remainder. Working need not be seen as could be done “by inspection.”  Or <i>Alternative Method</i> : <b>1<sup>st</sup> M1</b>: Use <math>(x + 2)(ax^2 + bx + c) = 2x^3 - 7x^2 - 10x + 24</math> with expansion and comparison of coefficients to obtain <math>a = 2</math> and to obtain values for <math>b</math> and <math>c</math>  <b>1<sup>st</sup> A1</b>: For seeing <math>(2x^2 - 11x + 12)</math>. [Can be seen here in (b) after work done in (a)]  <b>2<sup>nd</sup> M1</b>: Factorises quadratic. (see rule for factorising a quadratic). This is dependent on the previous method mark being awarded and <b>needs factors</b>  <b>2<sup>nd</sup> A1</b>: is cao and needs all three factors together. Ignore subsequent work (such as a solution to a quadratic equation.)  Note: Some candidates will go from <math>\{(x + 2)\}(2x^2 - 11x + 12)</math> to <math>\{x = -2\}</math>, <math>x = \frac{3}{2}</math>, <math>4</math>, and not list all three factors. Award these responses M1A1M0A0.  Finds <math>x = 4</math> and <math>x = 1.5</math> by factor theorem, formula or calculator and produces factors M1  <math>f(x) = (x + 2)(2x - 3)(x - 4)</math> <b>or</b> <math>f(x) = 2(x + 2)(x - 1.5)(x - 4)</math> <b>o.e. is full marks</b>  <math>f(x) = (x + 2)(x - 1.5)(x - 4)</math> <b>loses last A1</b></p>	

Question number	Scheme		Marks
<p>Method 1 5 (a)</p> <p>(b)</p>	<p>Puts <math>10 - x = 10x - x^2 - 8</math> and rearranges to give three term quadratic</p> <p>Solves their "<math>x^2 - 11x + 18 = 0</math>" using acceptable method as in general principles to give <math>x =</math></p> <p>Obtains <math>x = 2, x = 9</math> (may be on diagram or in part (b) in limits)</p> <p>Substitutes their <math>x</math> into a given equation to give <math>y =</math> (may be on diagram)</p> <p><math>y = 8, y = 1</math></p> $\int (10x - x^2 - 8) dx = \frac{10x^2}{2} - \frac{x^3}{3} - 8x \{+ c\}$ $\left[ \frac{10x^2}{2} - \frac{x^3}{3} - 8x \right]_2^9 = (\dots) - (\dots)$ $= 90 - \frac{4}{3} = 88\frac{2}{3} \text{ or } \frac{266}{3}$ <p>Area of trapezium = <math>\frac{1}{2}(8+1)(9-2) = 31.5</math></p> <p>So area of <math>R</math> is <math>88\frac{2}{3} - 31.5 = 57\frac{1}{6}</math> or <math>\frac{343}{6}</math></p>	<p>Or puts <math>y = 10(10 - y) - (10 - y)^2 - 8</math> and rearranges to give three term quadratic</p> <p>Solves their "<math>y^2 - 9y + 8 = 0</math>" using acceptable method as in general principles to give <math>y =</math></p> <p>Obtains <math>y = 8, y = 1</math> (may be on diagram)</p> <p>Substitutes their <math>y</math> into a given equation to give <math>x =</math> (may be on diagram or in part (b))</p> <p><math>x = 2, x = 9</math></p>	<p>M1</p> <p>M1</p> <p>A1</p> <p>M1</p> <p>A1 (5)</p> <p>M1 A1 A1</p> <p>dM1</p> <p>B1</p> <p>M1A1 cao (7)</p> <p><b>12 marks</b></p>
<p><b>Notes</b> (a)</p> <p>(b)</p>	<p>First <b>M1</b>: See scheme Second <b>M1</b>: See notes relating to solving quadratics</p> <p>Third <b>M1</b>: This may be awarded if one substitution is made</p> <p>Two correct Answers following tables of values, or from Graphical calculator are 5/5</p> <p><b>Just one pair of correct coordinates – no working or from table is M0M0A0M1A0</b></p> <p><b>M1</b>: <math>x^n \rightarrow x^{n+1}</math> for any one term.</p> <p><b>1<sup>st</sup> A1</b>: at least two out of three terms correct <b>2<sup>nd</sup> A1</b>: All three correct</p> <p><b>dM1</b>: Substitutes 9 and 2 (or limits from part(a)) into an "integrated function" and subtracts, either way round</p> <p>(NB: If candidate <b>changes all signs</b> to get <math>\int (-10x + x^2 + 8) dx = -\frac{10x^2}{2} + \frac{x^3}{3} + 8x \{+ c\}</math> This is M1 A1 A1</p> <p>Then uses limits dM1 and trapezium is B1</p> <p>Needs to <i>change sign of value obtained</i> from integration for final M1A1 so <math>-88\frac{2}{3} - 31.5</math> is M0A0 )</p> <p><b>B1</b>: Obtains 31.5 for area under line using any correct method (could be integration) or triangle minus triangle <math>\frac{1}{2} \times 8 \times 8 - \frac{1}{2}</math> or rectangle plus triangle [may be implied by correct 57 1/6 ]</p> <p><b>M1</b>: Their Area under curve – Their Area under line (if integrate both need same limits)</p> <p><b>A1</b>: Accept 57.16recurring but not 57.16</p> <p><b>PTO for Alternative method</b></p>		

<p><b>Method 2 for (b)</b></p>	<p>Area of R</p> $= \int_2^9 (10x - x^2 - 8) - (10 - x) dx$ $\int_2^9 -x^2 + 11x - 18 dx$ $= -\frac{x^3}{3} + \frac{11x^2}{2} - 18x \{+ c\}$ $\left[ -\frac{x^3}{3} + \frac{11x^2}{2} - 18x \right]_2^9 = (\dots) - (\dots)$ <p>This mark is implied by final answer which rounds to 57.2</p> <p><i>See above working(allow bracketing errors) to decide to award 3<sup>rd</sup> M1 mark for (b) here:</i></p> $40.5 - (-16\frac{2}{3}) = 57\frac{1}{6} \text{ cao}$	<p>3<sup>rd</sup> M1 (in (b) ): Uses difference between two functions in integral. M: <math>x^n \rightarrow x^{n+1}</math> for any one term. A1 at least two out of these three simplified terms Correct integration. (Ignore + c). Substitutes 9 and 2 (or limits from part(a)) into an "integrated function" and subtracts, either way round.</p>	<p>M1 A1 A1 dM1 B1 M1 A1 (7)</p>
<p>Special case of above method</p>	$\int_2^9 x^2 - 11x + 18 dx = \frac{x^3}{3} - \frac{11x^2}{2} + 18x \{+ c\}$ $\left[ \frac{x^3}{3} - \frac{11x^2}{2} + 18x \right]_2^9 = (\dots) - (\dots)$ <p>This mark is implied by final answer which rounds to 57.2 (not -57.2)</p> <p>Difference of functions implied (see above expression)</p> $40.5 - (-16\frac{2}{3}) = 57\frac{1}{6} \text{ cao}$		<p>M1A1A1 DM1 B1 M1 A1 (7)</p>
<p>Special Case 2</p>	<p>Integrates expression in y e.g. "<math>y^2 - 9y + 8 = 0</math>": This can have first M1 in part (b) and no other marks. (It is not a method for finding this area)</p>		
<p>Notes</p>	<p>Take away trapezium again having used Method 2 loses last two marks</p> <p>Common Error:</p> <p>Integrates <math>-x^2 + 9x - 18</math> is likely to be M1A1A0dM1B0M1A0</p> <p>Integrates <math>2 - 11x - x^2</math> is likely to e M1A0A0dM1B0M1A0</p> <p>Writing <math>\int_2^9 (10x - x^2 - 8) - (10 - x) dx</math> only earns final M mark</p>		

Question number	Scheme		Marks
6(a)	States or uses $\tan 2x = \frac{\sin 2x}{\cos 2x}$  $\frac{\sin 2x}{\cos 2x} = 5 \sin 2x \Rightarrow \sin 2x - 5 \sin 2x \cos 2x = 0 \Rightarrow \sin 2x(1 - 5 \cos 2x) = 0$ *		M1  A1  (2)
(b)	$\sin 2x = 0$ gives $2x = 0, 180, 360$ so $x = 0, 90, 180$  $\cos 2x = \frac{1}{5}$ gives $2x = 78.46$ (or 78.5 or 78.4) <b>or</b> $2x = 281.54$ (or 281.6)  $x = 39.2$ (or 39.3), $140.8$ (or 141)	B1 for two correct answers, second B1 for all three correct. Excess in range – lose last B1  M1  A1, A1  (5)	B1, B1  M1  A1, A1  (5)
<b>7 marks</b>			
Notes	<p>(a) <b>M1</b>: Statement that <math>\tan \theta = \frac{\sin \theta}{\cos \theta}</math> or Replacement of tan (wherever it appears). Must be a correct statement but may involve <math>\theta</math> instead of <math>2x</math>.  <b>A1</b>: the answer is given so all steps should be given.</p> <p>N.B. <math>\sin 2x - 5 \sin 2x \cos 2x = 0</math> or <math>-5 \sin 2x \cos 2x + \sin 2x = 0</math> or <math>\sin 2x(\frac{1}{\cos 2x} - 5) = 0</math> o.e.</p> <p><b>must be seen</b> and be followed by printed answer for A1 mark  <math>\sin 2x = 5 \sin 2x \cos 2x</math> is not sufficient.</p> <p>(b) Statement of 0 and 180 with no working gets B1 B0 (bod) as it is two solutions  <b>M1</b>: This mark for one of the two statements given (must relate to <math>2x</math> not just to <math>x</math>)  <b>A1, A1</b>: first A1 for 39.2, second for 140.8  <i>Special case</i> solving <math>\cos 2x = -1/5</math> giving <math>2x = 101.5</math> or <math>258.5</math> is awarded M1A0A0            140.8 omitted would give M1A1A0            Allow answers which round to 39.2 or 39.3 and which round to 140.8 and allow 141            Answers in radians lose last A1 awarded (These are 0, 0.68, 1.57, 2.46 and 3.14)            Excess answers <b>in range</b> lose last A1 Ignore excess answers outside range.            All 5 correct answers with no extras and no working gets <b>full marks</b> in part (b). The answers imply the method here</p>

7 (a)	<table border="1" data-bbox="311 387 1010 465"> <tr> <td><math>x</math></td> <td>0</td> <td>0.25</td> <td>0.5</td> <td>0.75</td> <td>1</td> </tr> <tr> <td><math>y</math></td> <td>1</td> <td>1.251</td> <td><b>1.494</b></td> <td><b>1.741</b></td> <td>2</td> </tr> </table>	$x$	0	0.25	0.5	0.75	1	$y$	1	1.251	<b>1.494</b>	<b>1.741</b>	2	B1, B1 (2)
$x$	0	0.25	0.5	0.75	1									
$y$	1	1.251	<b>1.494</b>	<b>1.741</b>	2									
(b)	$\frac{1}{2} \times 0.25, \{(1+2) + 2(1.251+1.494+1.741)\} \text{ o.e.}$ $=1.4965$	B1, M1, A1 ft  A1 (4)												
		<b>6 marks</b>												
Notes	<p>(a) first <b>B1</b> for 1.494 and second <b>B1</b> for 1.741 ( 1.740 is <b>B0</b> ) Wrong accuracy e.g. 1.49, 1.74 is B1B0</p> <p>(b) <b>B1</b>: Need <math>\frac{1}{2}</math> of 0.25 or 0.125 o.e. <b>M1</b>: requires first bracket to contain first plus last values <b>and</b> second bracket to include no additional values from the three in the table. If the only mistake is to omit one value from second bracket this may be regarded as a slip and <b>M</b> mark can be allowed ( An extra repeated term forfeits the <b>M</b> mark however) <math>x</math> values: <b>M0</b> if values used in brackets are <math>x</math> values instead of <math>y</math> values</p> <p><b>A1ft</b> follows their answers to part (a) and is for {correct expression} Final <b>A1</b>: Accept 1.4965, 1.497. or 1.50 only after correct work. (No follow through except one special case below following 1.740 in table) Separate trapezia may be used : <b>B1</b> for 0.125, <b>M1</b> for <math>\frac{1}{2}h(a+b)</math> used 3 or 4 times (and <b>A1ft</b> if it is all correct ) e.g.. <math>0.125(1+ 1.251) + 0.125(1.251+1.494) + 0.125(1.741 + 2)</math> is <b>M1 A0</b> equivalent to missing one term in { } in main scheme</p> <p>Special Case: Bracketing mistake: i.e. <math>0.125(1+2) + 2(1.251+1.494+1.741)</math> scores <b>B1 M1 A0 A0 for 9.347</b> If the final answer implies that the calculation has been done correctly i.e. 1.4965 (then full marks can be given). <b>Need to see trapezium rule – answer only (with no working) is 0/4 any doubts send to review</b></p> <p>Special Case; Uses 1.740 to give 1.49625 or 1.4963 or 1.496 or 1.50 gets, B1 B0 B1M1A1ft then A1 (lose 1 mark)</p> <p>NB Bracket is 11.972</p>
