

**ADVANCED SUBSIDIARY GCE**

**MATHEMATICS**

Probability & Statistics 1

**4732**

**QUESTION PAPER**

Candidates answer on the Printed Answer Book

**OCR Supplied Materials:**

- Printed Answer Book 4732
- List of Formulae (MF1)

**Other Materials Required:**

- Scientific or graphical calculator

**Friday 18 June 2010**

**Afternoon**

**Duration: 1 hour 30 minutes**

**INSTRUCTIONS TO CANDIDATES**

These instructions are the same on the Printed Answer Book and the Question Paper.

- Write your name clearly in capital letters, your Centre Number and Candidate Number in the spaces provided on the Printed Answer Book.
- **The questions are on the inserted Question Paper.**
- **Write your answer to each question in the space provided in the Printed Answer Book.** Additional paper may be used if necessary but you must clearly show your Candidate Number, Centre Number and question number(s).
- Use black ink. Pencil may be used for graphs and diagrams only.
- Read each question carefully and make sure that you know what you have to do before starting your answer.
- Answer **all** the questions.
- Do **not** write in the bar codes.
- You are permitted to use a graphical calculator in this paper.
- Give non-exact numerical answers correct to 3 significant figures unless a different degree of accuracy is specified in the question or is clearly appropriate.

**INFORMATION FOR CANDIDATES**

This information is the same on the Printed Answer Book and the Question Paper.

- The number of marks is given in brackets [ ] at the end of each question or part question on the Question Paper.
- **You are reminded of the need for clear presentation in your answers.**
- The total number of marks for this paper is **72**.
- The Printed Answer Book consists of **12** pages. The Question Paper consists of **4** pages. Any blank pages are indicated.

**INSTRUCTION TO EXAMS OFFICER / INVIGILATOR**

- Do not send this Question Paper for marking; it should be retained in the centre or destroyed.

- 1 The marks of some students in a French examination were summarised in a grouped frequency distribution and a cumulative frequency diagram was drawn, as shown below.

- (i) Estimate how many students took the examination. [1]
- (ii) How can you tell that no student scored more than 55 marks? [1]
- (iii) Find the greatest possible range of the marks. [1]
- (iv) The minimum mark for Grade C was 27. The number of students who gained exactly Grade C was the same as the number of students who gained a grade lower than C. Estimate the maximum mark for Grade C. [3]
- (v) In a German examination the marks of the same students had an interquartile range of 16 marks. What does this result indicate about the performance of the students in the German examination as compared with the French examination? [3]
- 2 Three skaters, *A*, *B* and *C*, are placed in rank order by four judges. Judge *P* ranks skater *A* in 1st place, skater *B* in 2nd place and skater *C* in 3rd place.

- (i) Without carrying out any calculation, state the value of Spearman's rank correlation coefficient for the following ranks. Give a reason for your answer. [1]

Skater	<i>A</i>	<i>B</i>	<i>C</i>
Judge <i>P</i>	1	2	3
Judge <i>Q</i>	3	2	1

- (ii) Calculate the value of Spearman's rank correlation coefficient for the following ranks. [3]

Skater	<i>A</i>	<i>B</i>	<i>C</i>
Judge <i>P</i>	1	2	3
Judge <i>R</i>	3	1	2

- (iii) Judge *S* ranks the skaters at random. Find the probability that the value of Spearman's rank correlation coefficient between the ranks of judge *P* and judge *S* is 1. [3]

- 3 (i) Some values,  $(x, y)$ , of a bivariate distribution are plotted on a scatter diagram and a regression line is to be drawn. Explain how to decide whether the regression line of  $y$  on  $x$  or the regression line of  $x$  on  $y$  is appropriate. [2]

- (ii) In an experiment the temperature,  $x$  °C, of a rod was gradually increased from 0 °C, and the extension,  $y$  mm, was measured nine times at 50 °C intervals. The results are summarised below.

$$n = 9 \quad \Sigma x = 1800 \quad \Sigma y = 14.4 \quad \Sigma x^2 = 510\,000 \quad \Sigma y^2 = 32.6416 \quad \Sigma xy = 4080$$

- (a) Show that the gradient of the regression line of  $y$  on  $x$  is 0.008 and find the equation of this line. [4]
- (b) Use your equation to estimate the temperature when the extension is 2.5 mm. [1]
- (c) Use your equation to estimate the extension for a temperature of  $-50$  °C. [1]
- (d) Comment on the meaning and the reliability of your estimate in part (c). [2]
- 4 (i) The random variable  $W$  has the distribution  $B(10, \frac{1}{3})$ . Find
- (a)  $P(W \leq 2)$ , [1]
- (b)  $P(W = 2)$ . [2]
- (ii) The random variable  $X$  has the distribution  $B(15, 0.22)$ .
- (a) Find  $P(X = 4)$ . [2]
- (b) Find  $E(X)$  and  $\text{Var}(X)$ . [3]

- 5 Each of four cards has a number printed on it as shown.

Two of the cards are chosen at random, without replacement. The random variable  $X$  denotes the sum of the numbers on these two cards.

- (i) Show that  $P(X = 6) = \frac{1}{6}$  and  $P(X = 4) = \frac{1}{3}$ . [3]
- (ii) Write down all the possible values of  $X$  and find the probability distribution of  $X$ . [4]
- (iii) Find  $E(X)$  and  $\text{Var}(X)$ . [5]
- 6 There are 10 numbers in a list. The first 9 numbers have mean 6 and variance 2. The 10th number is 3. Find the mean and variance of all 10 numbers. [6]

[Questions 7 and 8 are printed overleaf.]

7 The menu below shows all the dishes available at a certain restaurant.

Rice dishes	Main dishes	Vegetable dishes
Boiled rice	Chicken	Mushrooms
Fried rice	Beef	Cauliflower
Pilau rice	Lamb	Spinach
Keema rice	Mixed grill	Lentils
	Prawn	Potatoes
	Vegetarian	

A group of friends decide that they will share a total of 2 different rice dishes, 3 different main dishes and 4 different vegetable dishes from this menu. Given these restrictions,

- (i) find the number of possible combinations of dishes that they can choose to share, [3]  
 (ii) assuming that all choices are equally likely, find the probability that they choose boiled rice. [2]

The friends decide to add a further restriction as follows. If they choose boiled rice, they will not choose potatoes.

- (iii) Find the number of possible combinations of dishes that they can now choose. [3]

8 The proportion of people who watch *West Street* on television is 30%. A market researcher interviews people at random in order to contact viewers of *West Street*. Each day she has to contact a certain number of viewers of *West Street*.

- (i) Near the end of one day she finds that she needs to contact just one more viewer of *West Street*. Find the probability that the number of further interviews required is  
 (a) 4, [3]  
 (b) less than 4. [3]
- (ii) Near the end of another day she finds that she needs to contact just two more viewers of *West Street*. Find the probability that the number of further interviews required is  
 (a) 5, [4]  
 (b) more than 5. [2]
